- Since the end of Gerterber 1950, the cash on hand at the Deutsche Tote bank and its approximately 90 affiliates in the Soviet Zone has been reduced from DN 1,100,000,000 to DN 850,000,000. This difference in cash standing is accounted for in the a) payment of DM 100,000 on pre-currency reform accounts belonging to the aged, b) increases in social security payments and pensions to retired persons, c) increases in salaries and wages. In creat to avoid a further shrinkage of cash reserves, the Ministry of Finance has undertaken, in cooperation with the Deutsche Notenbank and the Soviet Zone organization of savings banks (Sparkassenverband), the development of new ideas for increasing savings deposits.
- 7. The need for money units of DM 1.00 and DM 2.00 has steadily increased. The Deutsche Notenbank, therefore, has plans for the issue of DM 100,000 in new notes of these denominations. The issue of the more desirable coins has been ruled out because of the shortage of non-ferrous netals. Even the supply of suitable paper for the printing of currency presents the greatest difficulty at present in bringing out the new issue. For this same reason, the printing of replacement notes had to be deferred until sometime in 1951.
